

# Manage Identities Within Your Platform.

Simplify the process of integrating identities and access across multiple applications and platforms for your users.

Talk to Us

## Open ID Connect

### Enables websites and applications to authenticate users

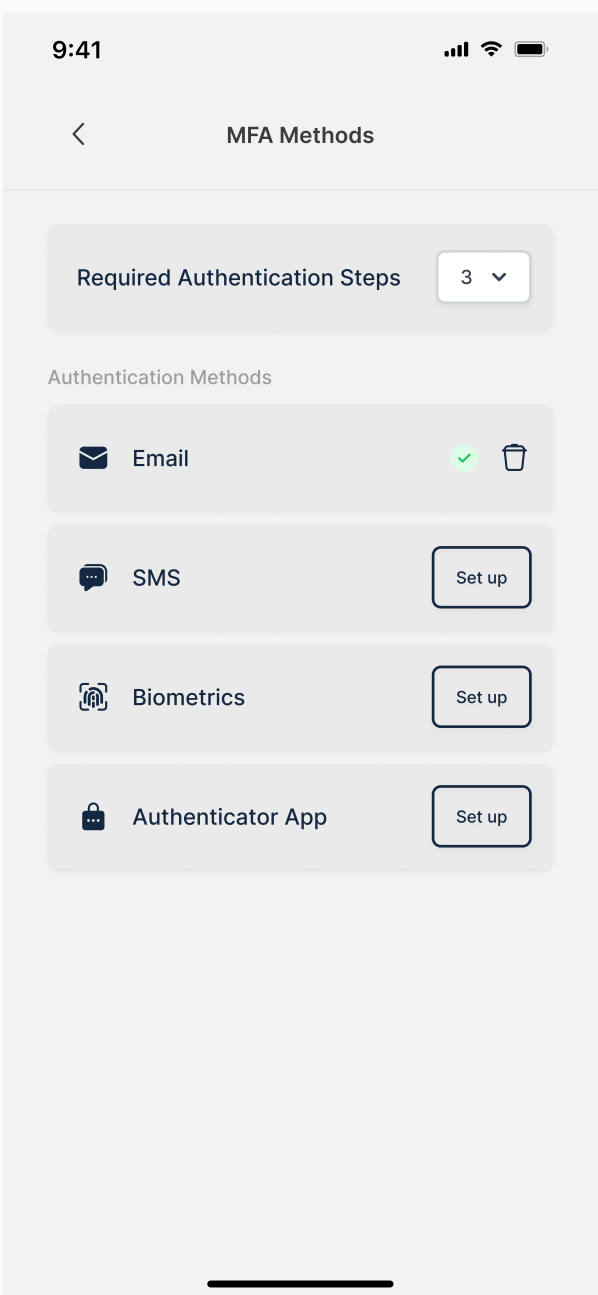

OpenID Connect is a technology that helps websites and apps confirm who you are. It will keep your information safe and give you access to the right things.

## Multi-factor Authentication

### Don't leave security to chance, check all the boxes with MFA.

Double the protection, double the security! Multifactor authentication adds extra layers of security to keep your information safe.

## API Access and OAuth2.1

### Simplify data management and streamline access

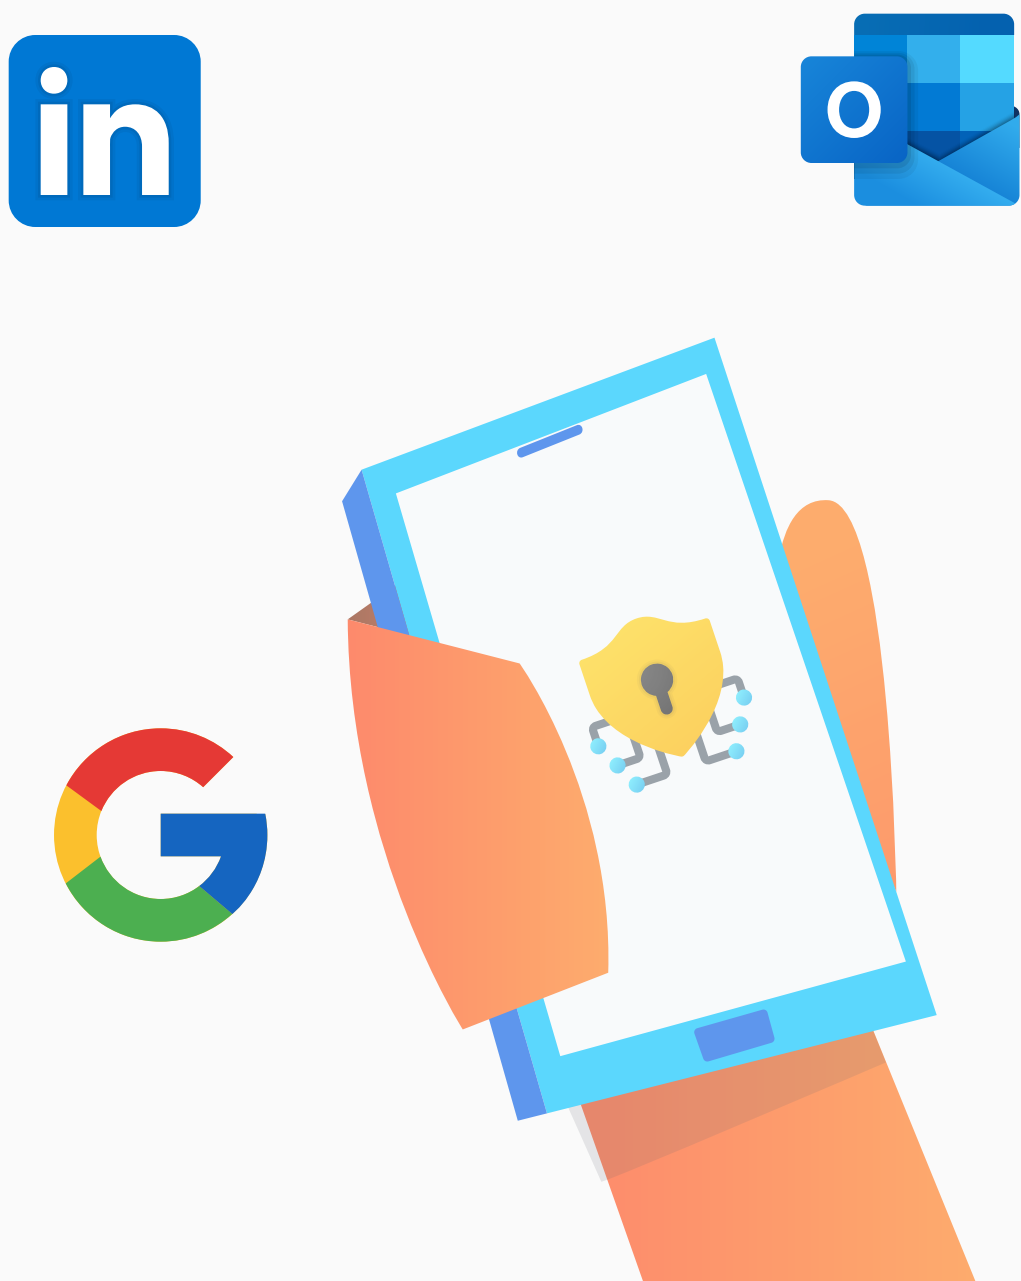

Simpltel provides a secure and simple way for clients to authenticate and access resources using their own credentials

## Single Sign-On

### One login. Multi-app access.

Leverage trusted identity platforms you use everyday to secure, store, and access credentials and resources.

## Mission

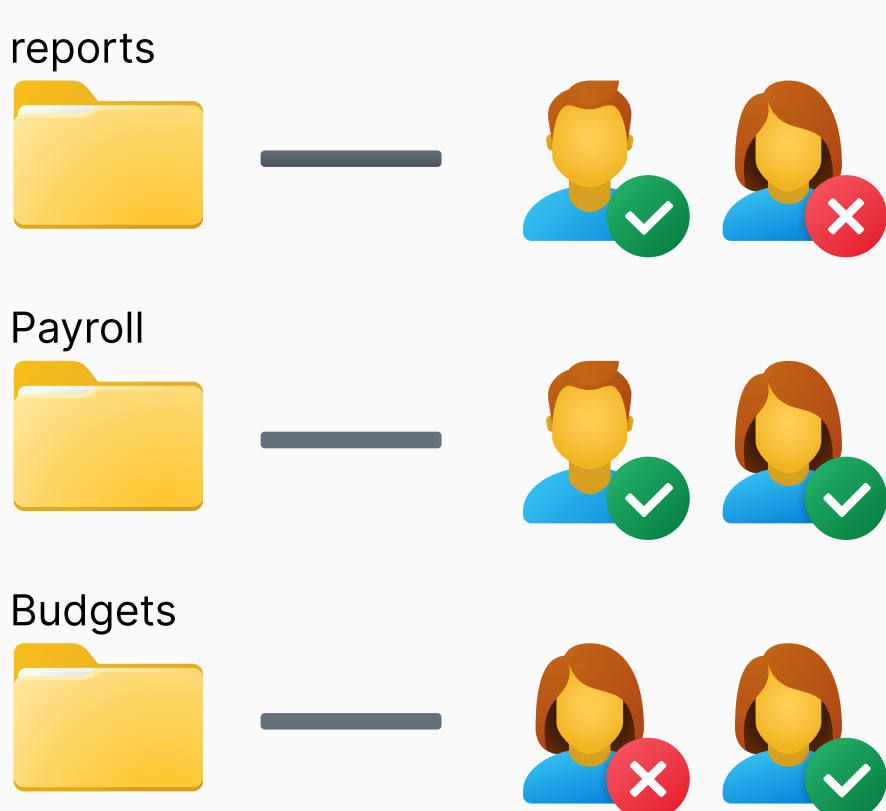

### IAM, your personalized bodyguard.

It protects your online identity and ensures that only you and authorized individuals can access your important information. So sit back, relax, and let IAM security do the heavy lifting

## Granular Permission

### Customize access rights for better security.

With Granular permissions, you can regulate who has access to certain areas of an organization or database by providing specific access privileges to users or groups of user
